EXECUTIVE SUMMARY

This BRSR Compliance Report aggregates 800 case-level traces. The compliance check yields a fitness score of 57.9% with 368 active violations and 9 bottleneck activity nodes, where the worst delay is at 'Landfill Disposal'. Carbon attribution models tracked a total actual emission of 3931.6 kg CO2e (WITHIN_LIMIT), identifying 10 carbon hotspots with the largest hotspot at 'Customs Clearance'. ESG overall scoring achieved 73.2%, monitoring 5 suppliers. Based on the collected evidence, this disclosure is classified as 'Needs Review'.

RECOMMENDATIONS

Standardize compliance validation workflows

Process compliance score is currently at 57.9% with 368 active violations. Action is required to standardize compliance checks.

HIGH

Remediate supplier compliance risk

Detected 5 at-risk suppliers with active process conformance violations.
